

IBS Maintenance Sheet

Care & Maintenance of IBS supplied EGGER OS'Floor™

EGGER OS'FLOOR™

Created from oriented strand board (OSB), EGGER OS'Floor™ is an edge sealed, tongue and groove profiled, flooring substrate. It is for internal use with timber or steel framing.

Lightweight and easy to handle, it is a strong, dimensionally stable panel that resists warping and delamination. EGGER OS'Floor™ is marked with the major axis and nail grid to enable correct fixing. The tongue and groove joints helps to ensure squeak free joints. Once installed it is not intended to be left in its raw state.

NOTE:

Maximum exposure to weather must not exceed three months. Where EGGER OS'Floor™ is exposed to excess moisture, mechanical sanding maybe required if swelling has occurred at the panel joints.

FINISHING THE FLOOR

EGGER OS'Floor™ is required to be sealed or overlaid with an appropriate protective floor covering (tile, carpet, etc.) or a paint (not water based) or a membrane system compatible with a composite timber.

Where the panels are used in areas prone to water splash, a waterproof membrane or impervious floor covering must be used.

MAINTENANCE

Under normal conditions EGGER OS'Floor™ requires no maintenance providing that the protective covering has been maintained. If water damage occurs to an area where EGGER OS'Floor™ has been used, ensure the area is allowed to dry before replacing any covering or coating.
